Location and Traffic

Shuimei Village is located in the south-west of Xinxing County, Yunfu City, Guangdong Province, under the jurisdiction of Liuzu Town. The village has a history of nearly 700 years. It got its name "Shuiwei" because the river surrounded the village, and later evolved into "Shuimei". Shuimei Village is 10 kilometers away from the county seat, and the main road of the village is located on X484 County Road, which is connected with Shencen high-speed, and the traffic is relatively convenient.

Site Status Analysis

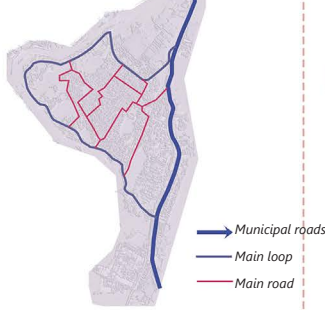

Landscape resources

Shuimei village is relatively flat with "ship harbor river" surrounding the village, hence the name "shui wai" village. The water system runs from north to south. Outside the village for woodland and fruit forest, northwest to large farmland, the village has a lot of paddy fields and fish ponds.

Road status

Shuimei village of basic hardening roads, county roads connecting the exterior, basic village road unobstructed, part of the internal poor road conditions.

The site is rich in land resources, but most of the farmland and fish ponds are contracted by contractors, and the landscape around the ponds is dilapidated.

Public space status

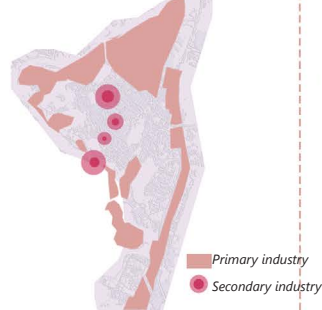

The existing public activity spaces in Shuimei village include cultural squares, which are used for most of the villagers' daily and festive activities.

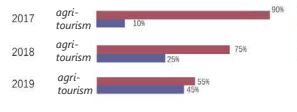

There is a serious lack of public activity space for villagers.

Industry status

Shuimei village takes advantage of unique geographical and environmental conditions and mainly focuses on the primary industry. The village also has rich historical and cultural resources, in recent years to develop the tertiary industry.

The village has made great efforts to develop tourism industry, but the annual tourism output value is not high.

Construction status

There are 156 large houses built in the Ming and Qing dynasties, each about 110 square meters, neatly arranged. The whole ancient building group is from southwest to northeast, the road is horizontal and vertical line, the layout is neat and reasonable.

Existing more abandoned ancient buildings, at the same time between the buildings of the street space utilization rate is nothing.

Planning Strategy

1. Create a multi-level, orderly and rich public exchange space system

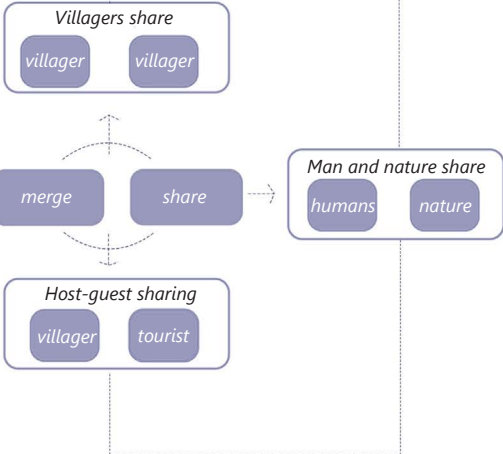

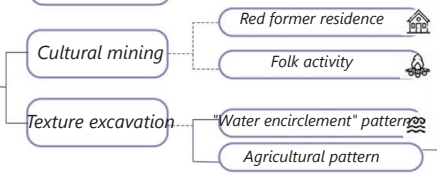

2. Pay attention to the actual needs of people and improve the infrastructure of public space

3. Make use of local characteristic landscape elements to create local characteristic theme public space

4. Respect the original rural pattern and continue the traditional context

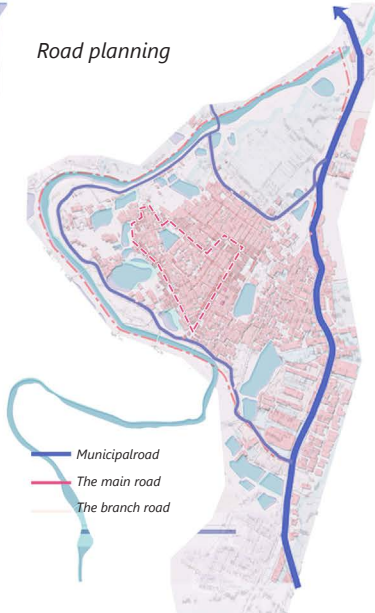

Planning Analysis

Water system planning

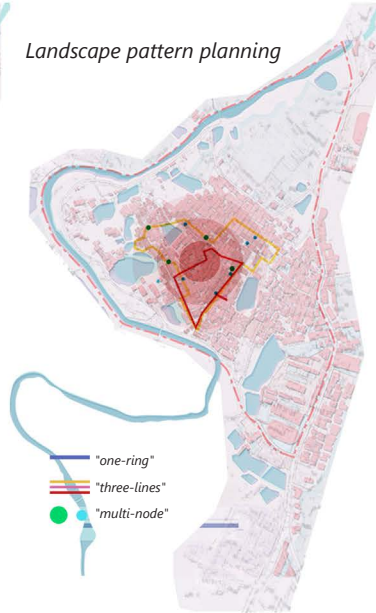

The plan will comb and connect rivers and ponds, improve the natural ecological benefits and landscape benefits, and promote the integration of natural and unnatural.

Road planning

Sort out the network of streets and lanes inside the village, get through the break point of the path, improve the connectivity of the site, and provide more convenient walk routes.

Landscape pattern planning

The plan will form a one-ring, three-line and multi-node structure, with "one-ring" as the main loop, "three-lines" as the hidden folk custom, red and life, and "multi-node" as multiple spatial nodes along the three-line one-ring.

Public space system planning

The plan will integrate multiple abandoned lands around the loop line and form a series of public Spaces distributed in villages, so as to improve the environment and improve the utilization rate of abandoned space.

Maser Plan
