First Prize

Impression of Yishan

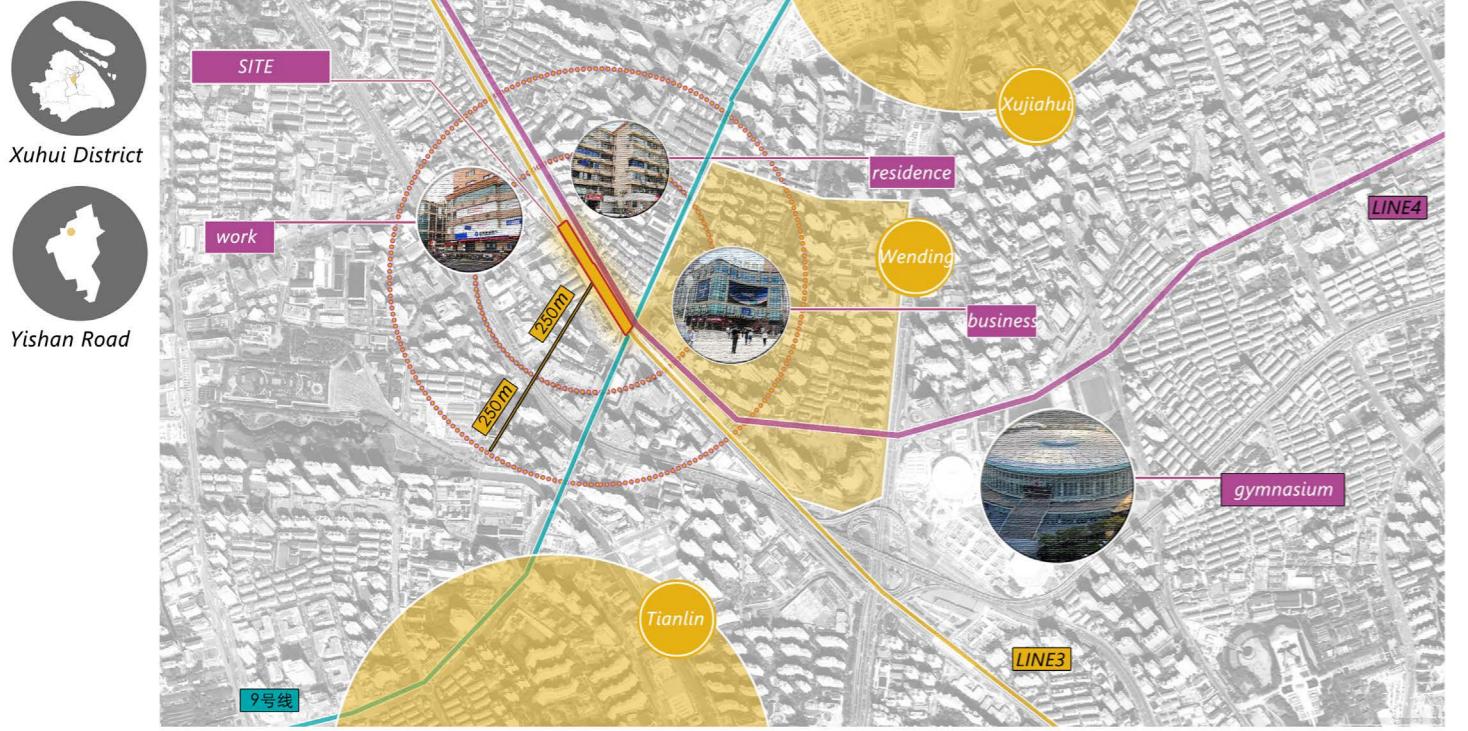

**Chaotic
Disorder**

A large number of building materials and furniture enterprises have gathered around Yishan Road, which is also one of the largest building materials streets in Shanghai. In addition to the building materials market, the surrounding land is also mixed with a large number of residential and office buildings. Therefore, Yishan Road station carries the traffic demand of commuting and shopping, and the peak of passenger flow during commuting and holidays is more obvious.

As an important traffic node, the narrow Yishan Road Station has a number of subway lines, bus lines, car and non-motor vehicle parking areas, and is also the starting station of bus 76. Because it is responsible for the transfer of three rail transit lines, temporary fences are set up in the walking area to guide the route. There are subway entrances, wind pavilions and other structures around the station, and a number of small structures are also scattered. On the whole, the site features are mixed and disorganized, and the walking experience is not good.

Colorful Line

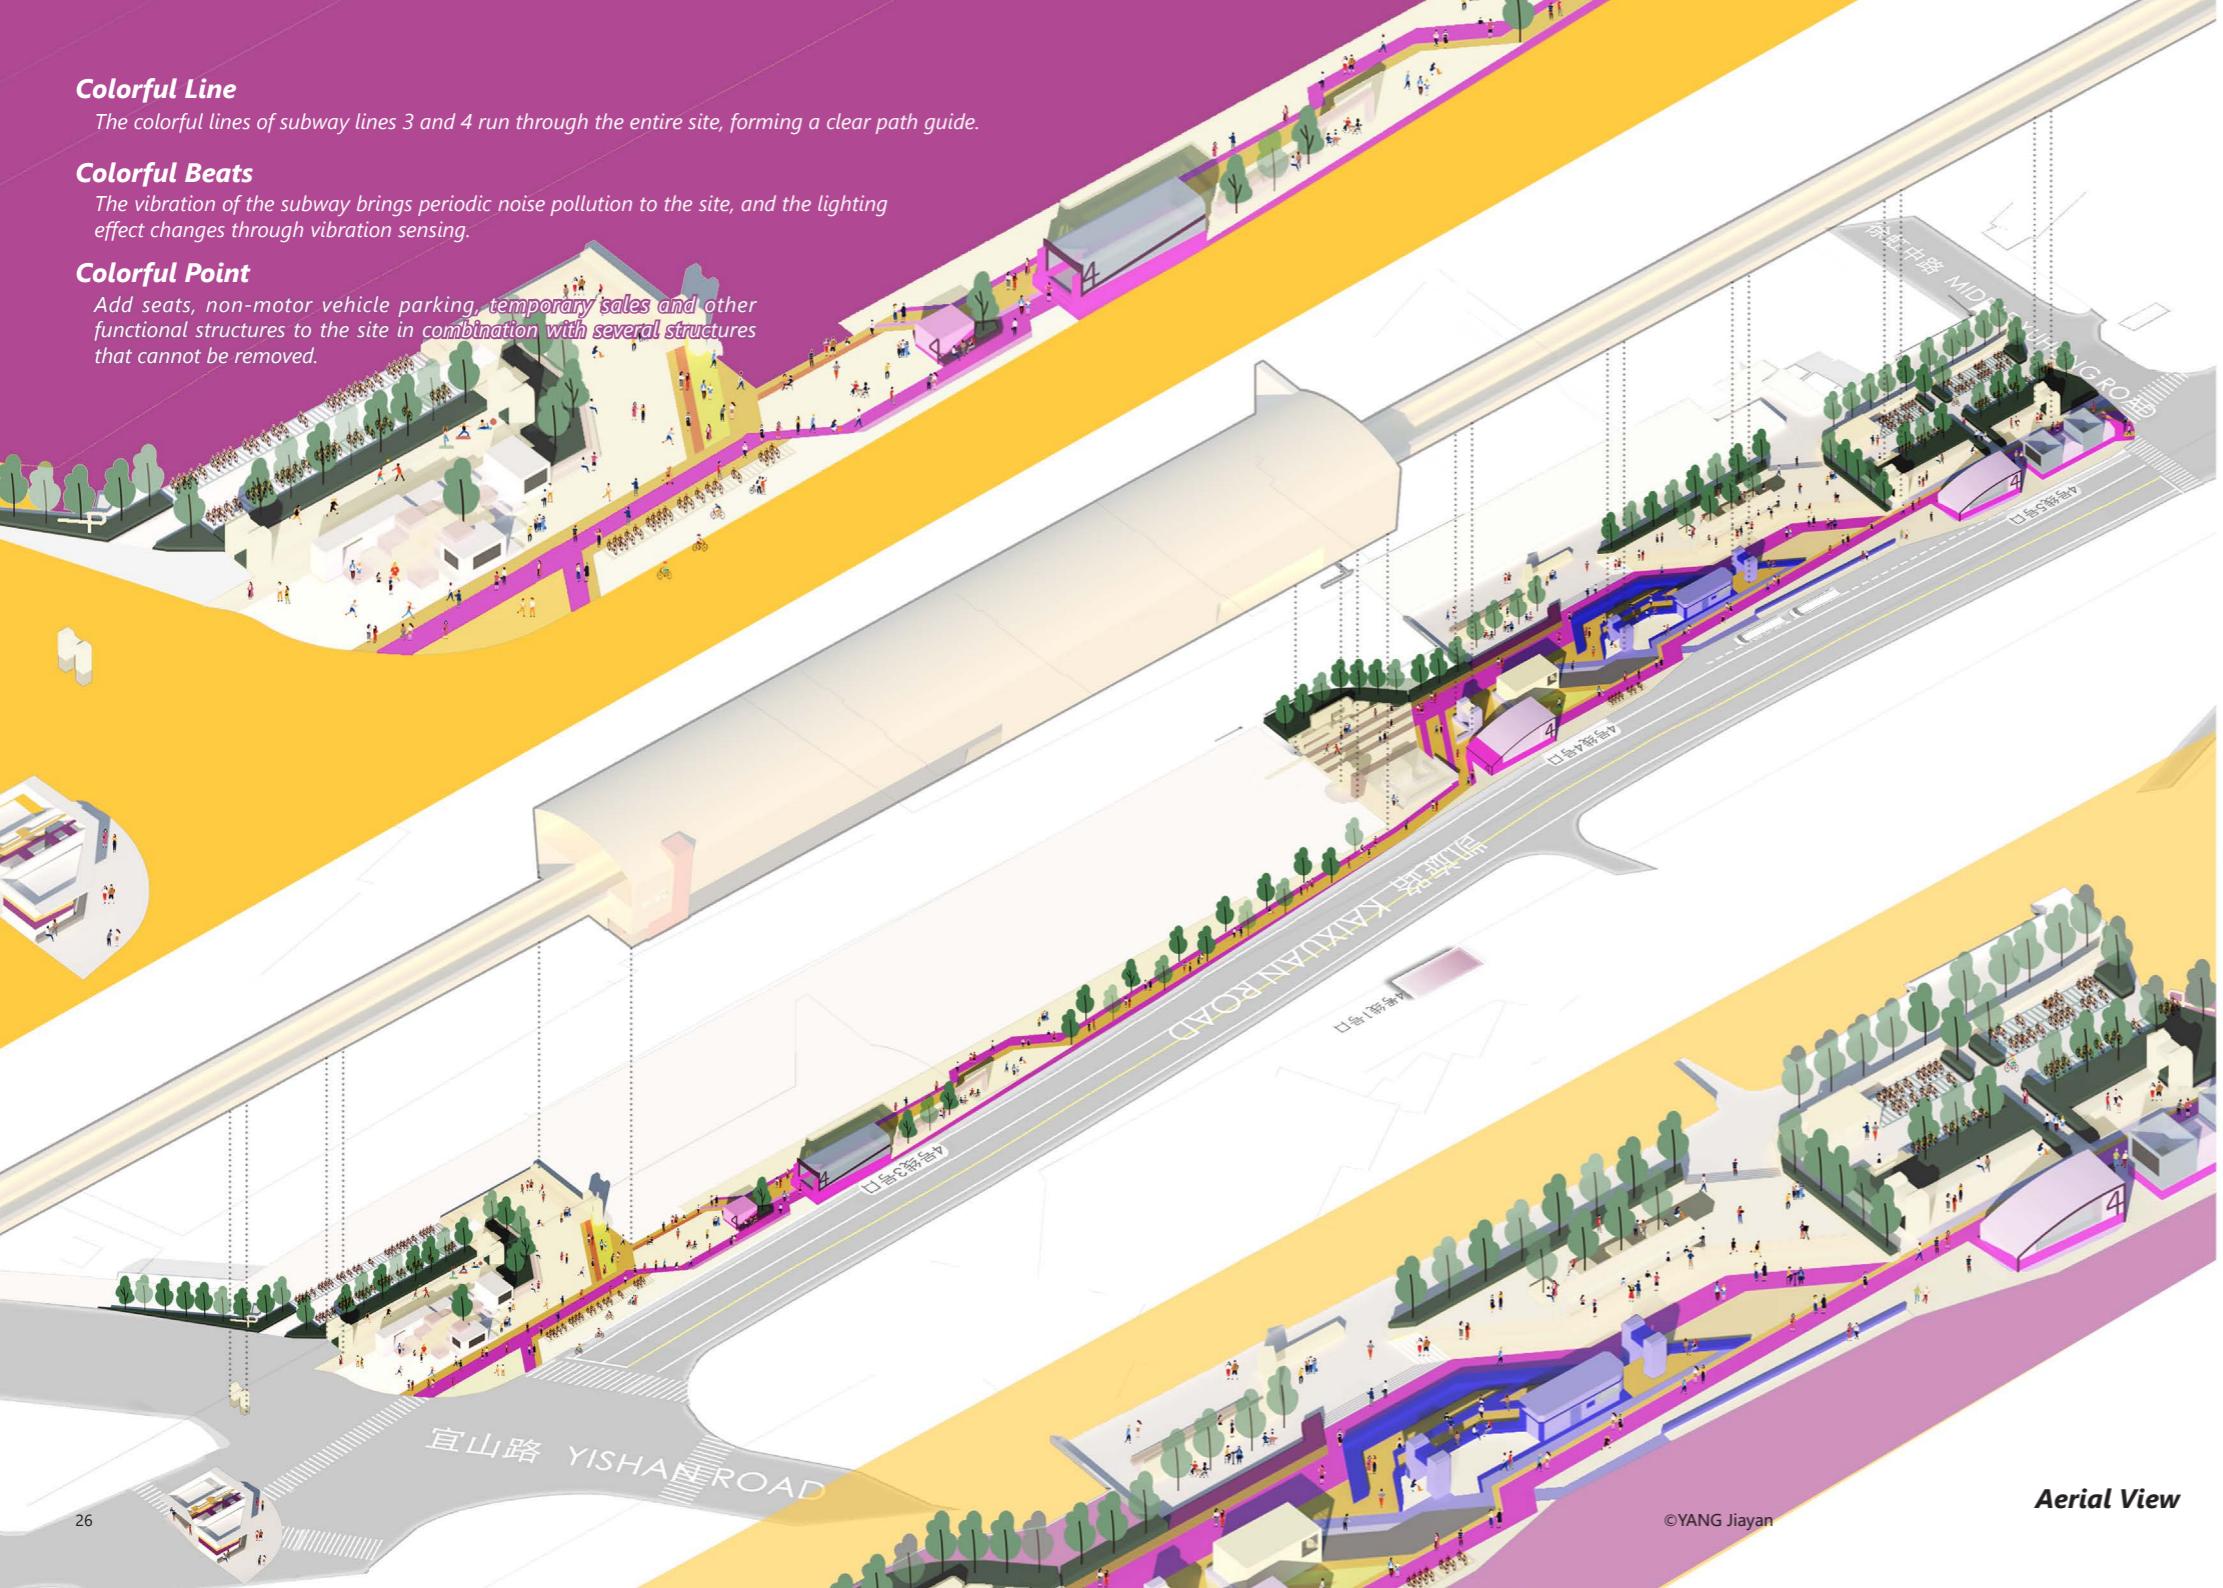

The colorful lines of subway lines 3 and 4 run through the entire site, forming a clear path guide.

Colorful Beats

The vibration of the subway brings periodic noise pollution to the site, and the lighting effect changes through vibration sensing.

Colorful Point

Add seats, non-motor vehicle parking, temporary sales and other functional structures to the site in combination with several structures that cannot be removed.
